Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-14, 22 and 23 rejected under 35 U.S.C. 102(b) as being clearly anticipated by DE 2,016,348, hereinafter referred to as Grope.

Grope teaches a hot melt system having a back-up temperature sensor, thermistor paeg 6 on line 2 in the translation of the same, with an automatic switching over to the second thermistor sensor when the first sensor fails. Note that the switching over can also be manual. See page 6 lines 6-12. As per claim 7 Grope also teaches on page 6 lines 16-17, an optical display indicative of the failure of the sensor. As per claim 11 upon no failure of the first sensor, the first sensor would be cycled on and off responsive to on and off use of the hot melt device, barring further description of the term, "cycle'.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-5,15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grope,348'. Grope teaches the claimed heating system including extra temperature sensors, but does not specifically define a program or executing of a program to determine malfunction of one sensor and automatic switching to the back-up sensor in response to the malfunction. It is considered obvious that a program, barring further description of the same, instituted in Grope to detect failure of the first sensor, since such failure is detected and responded to, as claimed. The artisan is fully aware that program controlled subroutines in microprocessors are extremely common in state of the art appliances, including microwave ovens, etc. and the artisan would have found it obvious and logical to choose such controller in lieu of time consuming, piecemeal constructing the entire controller with individual circuit elements. Such program would automatically be instituted by a simple timer controlled checking of the status of the working temperature controller, periodically, during the operation of the device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark H. Paschall whose telephone number is 703 308-1642. The examiner can normally be reached on 7am - 3pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 571-272-4777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
